

POST-CALL FOLLOW-UP SEQUENCE

Three considered touches across ~24 hours, then 10-day rest. Voicemail and text are manual (right after the call). The email fires automatically from a GHL workflow the next business day at 9:30 AM in the contact's timezone.

THE SEQUENCE — END TO END

01

YOU · MANUAL

Call & Voicemail

Plants the seed. Standard voicemail script.

02

YOU · MANUAL

Text Follow-Up

Within 60 seconds of voicemail. Casual, referral-framed. Keeps it top of mind on their phone.

03

GHL · AUTOMATED

Proper Email

Next business day · 9:30 AM (contact's tz). Introduces you, adds value, soft door — not a hard pitch.

04

GHL · AUTOMATED

Re-Queue for Call

10 days after email. Loops contact back into your daily call queue.

HOW TO BUILD IT IN GHL

- 1 **Open the workflow.** GHL → **Automation** → **Workflows** → open your post-call follow-up workflow.
- 2 **Delete the SMS step.** You're texting manually right after the call now, so the workflow's SMS action is dead weight. Right-click the SMS step → **Delete**.
- 3 **Change the email delay.** Find the existing "Wait 3 hours" step before the email. Click it → in the right panel, change **Action Type** to **Wait until day of week & time**.
- 4 **Configure the wait** using the settings in the panel to the right →
- 5 **Confirm the email step** still fires after that wait. Tweak the opener if needed — current copy may assume "we spoke this morning" tone; should now read "followed up yesterday by text..."
- 6 **Verify the 10-day re-queue** wait still sits after the email step. Total time from original call to next call: ~11 days.
- 7 **Save → Publish** (blue button, top right). Then fire a test against your own contact record and confirm the email lands at 9:30 AM the next business day.

WAIT STEP SETTINGS

"WAIT UNTIL DAY & TIME"

Days	Mon · Tue · Wed · Thu · Fri
Time	9:30 AM
Timezone	Contact TZ
If past time today	Next valid time
Weekend handling	Skip to Mon

SEQUENCE SUMMARY

STEP	OWNER	TIMING	PURPOSE
 Call + VM	YOU	Day 1 · 9:00 AM	Plants the seed. Voicemail script tied to referral context.
 Text	YOU	Day 1 · 9:01 AM (immediate)	Casual, low-friction. Catches them while VM notification is fresh.
 Email	GHL	Day 2 (business) · 9:30 AM contact tz	Proper intro, value line, soft CTA. Arrives during inbox triage.
 Re-Queue	GHL	+10 days after email (~Day 12)	Loops contact back into call queue for cycle 2.

Why next-day beats 3-hour. Three-hour-later emails compete with the same-morning text for attention and read like a sequence drip. Next-morning 9:30 AM lands during inbox triage (decision-making time), feels like a separate considered touch, and gives the text a full afternoon to do its job. The cost is a small loss of same-day momentum — worth it for a consultative sale like bookkeeping.
